MediaTemple (dv) Backup to S3 Script

2009

1 min read • 72 words

The Problem

MediaTemple servers run the Plesk Control Panel, which has a reputation for having useless backups.

The Solution

- MySQL Dumps of all Databases and Tables
- All configured vhosts, zipped up
- Pushes it all to either S3 or FTP

Stick it in `/etc/cron.daily/`, and you'll be good to go. No more worries. No more headaches. Ever.

Note: Standard FTP is also supported.

The Code
