GistAPI.py v0.1 Released

2010

1 min read • 92 words

Today I released GistAPI.py v0.1.2. It features a highly-optimized Gist object model and API wrapper which allows you to consume Gists in your next Python application.

GitHub just rolled out a miniature pre-release of the Gist API last month, so API functionality is pretty limited at the moment. More features will be added as soon as the API is updated.

Usage

```
from gistapi import *

gist = Gist('d4507e882a07ac6f9f92')

gist.description # 'Example Gist for gist.py'
gist.created_at # '2010/05/16 10:51:15 -0700'
gist.public # False
gist.filenames # ['exampleEmptyFile', 'exampleFile']
gist.files['exampleFile'] # 'Example file content.'
```
