

ShowMe v1.0.0 Released

2010

1 min read • 89 words

This weekend, I released a new Python module to PyPI: ShowMe v1.0.0.

ShowMe is a simple set of function decorators that give you easy diagnosis of common problems in your Python applications.

Basic Usage

```
@showme.trace
def complex_function(a, b, c, **kwargs):
    ...
```

```
>>> complex_function('alpha', 'beta', False, debug=True)
calling haystack.submodule.complex_function() with
args: ({'a': 'alpha', 'b': 'beta', 'c': False},)
kwargs: {'debug': True}
```

It currently supports:

- Argument call tracing
- Execution Time (in seconds)
- CPU Execution Time
- Docstrings

Roadmap

- Add @showme.locals Support
- Add @showme.globals Support

Installation

```
$ pip install showme
```
